

Jean Medeiros

Senior Frontend Engineer / Tech Lead

Brazil · Remote · jeamcrv@hotmail.com · linkedin.com/in/skycod3 · github.com/skycod3

Frontend engineer with 8 years of experience, currently leading a 4-person team. I built the agency's shared design system and an AI-driven renewal pipeline that cut the site delivery cycle from ~3 days to ~2 hours — and introduced version control and modern frontend practices along the way.

EXPERIENCE

Frontend Tech Lead

2024 — Present

AgênciaNet

Designed and built the design system behind a library of ~35 site templates, now the baseline for every new project at the company.

Cut the client site renewal cycle from ~3 days to ~2 hours (~7 renewals/month) with an AI-driven pipeline: template selection, content ingestion via internal API, and layout adaptation to each client's business.

Set the template quality bar: WCAG, Core Web Vitals, cross-browser compatibility, responsive design, and technical SEO.

Introduced Git to a company with no version control; established English as the standard for code, design, and documentation.

Frontend Developer → Senior

2018 — 2024

AgênciaNet

Delivered institutional websites and landing pages as the team's main output, becoming its primary reference for CSS and JavaScript.

Grew from developer into a technical leadership role over ~4 years, researching and introducing modern CSS/JavaScript techniques the team had not used before.

Started the HTML/CSS/JavaScript training for new hires, lifting the front-end team's baseline.
